TECHNICAL SKILLS

Languages: Go (Golang) | Python | SQL | Bash

Tools & Technologies: ClickHouse | PostgreSQL | Airflow | Docker | Git & GitHub | VS Code | Linux OS

EDUCATION

Rajalakshmi Engineering College

BE Computer Science Engineering

International Indian School

High School (11th and 12th Grade)

Chennai, India

Graduation Date: May 2025

Jeddah, Saudi Arabia

Graduation Date: May 2021

EXPERIENCE

Associate Data Engineer

Quantrail Data Pvt Ltd | Chennai, Tamil Nadu, India

June 2025 - Present

- Contributed to migrating data infrastructure from Elasticsearch and HDFS to ClickHouse and building supporting pipelines.
- Contributed to testing of CHOps, a ClickHouse admin platform including backup-related workflow.
- Developed and tested backup and restore systems for PostgreSQL and Qdrant using pgBackRest, snapshots, MinIO, and scheduled automation.
- Built a Vector-based monitoring pipeline to collect server and GPU metrics and ingest them into ClickHouse.
- Contributed to building scalable ingestion workflows and reusable scripts used across multiple data domains and pipeline components.

Associate Engineer

Quantrail Data Pvt Ltd | Intern | Chennai, Tamil Nadu, India

April 2025 – June 2025

- Built a strong foundation in data engineering using Python, SQL, Linux, Git, PostgreSQL, ClickHouse, Airflow, Docker and Kafka.
- Gained hands-on experience in data-modeling, SQL optimization, ETL orchestration and database performance tuning.
- Worked with relational and columnar databases while developing data pipelines and containerized workflows.

HACKATHONS

Click-a-Thon 2026 – 24-Hour ClickHouse Hackathon

Team Leader

Polaris School of Technology, Bangalore | Aug 2026

- Built “Why Did it Move?”, a ClickHouse-powered system for investigating business metric changes and identifying the segments responsible for them.
- Designed the investigation pipeline to generate evidence-backed explanations from ClickHouse data, with Langfuse used to trace and audit LLM interactions.
- Built and debugged the working MVP as part of three-member team during ClickHouse’s first in-person Click-a-Thon in India.

TechQuest – 24-Hour Hackathon

Team Leader

St. Joseph’s University, Bangalore | Apr 2024

- Led a 3-member team through a fast-paced build cycle, prioritizing MVP completion and time management.
- Took charge of backend integration, team coordination, and deployment of a working medical reminder solution.
- Strengthened leadership and real-time problem-solving skills under pressure.

PROJECTS

Kafka → ClickHouse Real-Time Data Pipeline

Mini Project | Quantrail Data (Self-initiated)

[GitHubRepo](#)

2025

Tech Stack: Kafka, Python, ClickHouse, Docker

- Built a real-time streaming pipeline ingesting mock user signup data from Kafka to ClickHouse.
- Developed a Python Kafka Producer to simulate streaming events into a user-signups topic.
- Leveraged ClickHouse Kafka engine tables and materialized views for automated data consumption.
- Containerized the entire pipeline using Docker for seamless orchestration and portability.
